CANCOS
TILE & STONE

NATURAL

All the substrates used to make porcelain are resin free. Clay, kaolinite, feldspar, silica, and other minerals are all substances found in nature.

HYGIENIC

Suitable for contact with food due to their almost zero absorption rate. Plus, our HRS are NSF certified.

EASY CLEANING

Most dirt easily removed with hot water and a cloth. Use neutral cleaners when necessary.

INDOOR/OUTDOOR

Because of all the properties of porcelain slabs, they are suitable for any indoor or outdoor kitchen, both residential or commercial.

UV RESISTANT

Pigments in porcelains are permanently stabilized by their baking process and will not change in direct sunlight.

FROST RESISTANT

Porcelains average water absorption is .1%. Impervious to water and freezing, they are perfect for outdoor use!

SCRATCH RESISTANT

Their extremely hard surfaces make them exceptionally resistant to both scratches and deep abrasion.

HEAT RESISTANT

Porcelain surface does not burn or get damaged with hot pots.

CHEMICAL RESISTANT

Can easily be cleaned with hot water and neutral cleaners. Porcelains resist chemicals, acids, bases organic and solvents.

WATERPROOF

With absorption nearly zero, porcelains are both water and liquid resistant.

MOLD PROOF

Due to almost zero absorption, porcelains are mold, mildew, and fungus resistant. There is no surface area to inhibit their spores and allow growth.

STAIN PROOF

Wine, oil, coffee, sauces, lemons, vinegar, and other detergents will not affect these porcelain surfaces.

HIGH FLEX STRENGTH

Porcelains are extremely dense in mass, thus providing a very high flexural strength; they are extremely difficult to bend or crack.

FIRE PROOF

Porcelains have a non-combustible surface. They will not burn or produce smoke and any toxic fumes.

THERMAL SHOCK PROOF

Due to porcelains high technical performance, these counters can withstand hot and cold temperature fluctuations. Hot pots are not a problem, using them outdoors is fine, and ice cannot damage the surface either.
